

59souls Develops version 2.0 of EvrCare IoT ecosystem for Cytta Corp.

59souls Inc. - Cytta: 2017 /Q4 – 2018 / Q1

Throughout the year Cytta and 59 Souls Inc. programmers have labored to upgrade the original Version 1.0 of Cytta's technology and created a more robust and fully integrated market-ready Version 2.0 remote monitoring technology we call - EvrCare™. Under the EvrCare™ model, once the VeriSmartPhone™ receives the data from the medical peripherals, it reviews the data and decides to instigate communication via voice, video, SMS or email in real-time to the Oracle Cloud, and directly to the caregiver and back again. Everything is accomplished without touching the VeriSmartPhone™. This provides patients with a low cost, 24/7, intelligent, instantaneous and automatic monitoring system at any location at any time. Cytta's EvrCare™ model has been designed to utilize Oracle software in version 2.0 of the VeriSmartPhone's™ proprietary android OS and online platform.

Oracle is now supplying their Database platform including analytics, security and big data to the EvrCare™ system

Mr. Johnson and his software design team conceptualized and built the EvrCare IoT ecosystem. Mr. Johnson has 25+ years of success leading business development, project management, software development, and extensive post production experience within advertising agencies and production companies across America and Europe.

Mr. Johnson had extensive knowledge in Video On Demand and enterprise server technologies. Mr. Johnson has a Masters and a Bachelor in Arts and Sciences, in Communication, Business and a major in 3D Computer Graphics animation software from NY Institute of Technology, and a Bachelor of Art: Painting, Drawing, and Traditional Animation from San Francisco Art Institute.
